

# Platts RigData Datasets

Experience the benefits of field-vetted data with the **speed and ease of a dataset.**

Permitting data, drilling activity, longitude and latitude data, rig specifications, contact details of operators and contractors- all delivered in a format you can filter, customize, import and distribute within your organization.

Take advantage of receiving the same quality and in-depth data of our PDF reports but in the flexibility and ease of an import. Measure shale plays like never before with dozens of unique data fields you can arrange, prioritize and analyze.

## Understand future exploration trends

As the best indicator of future drilling activity, receiving permit data in a dataset allows you to quickly sort these leads by location or operator. Identify permit status by pending or approved, to **prioritize plans of action**. Use the well type and orientation data to **better align your resources** to fit the logistics and type of drill being planned.

## Drilling activity and location data

Essential to oil field service companies is location data. It is critical in delivering products and services to the site. And when including longitude and latitude data points along with the detailed driving instructions, your service team will be on the spot with **no time wasted**. Sort by state and county and filter by operator to **isolate the best opportunities** for your field sales team. Parse out sections to your sales managers to help them **save time prioritizing opportunities**.

## Competitive insight

Derive more insight about the drilling activity of competitive operators. Structure the data by geographical location, play or basin that most affect your business. Filter by E&P company to **gain competitive knowledge** of where conventional drilling is occurring and by whom. Use driller data such as utilization, well types, trajectories and footage to build strategies that **take advantage of the trends** in the upstream hydrocarbon markets.

## Rig fleet and specifications

Platts RigData maintains an in-depth database of drilling contractors, their contact information and fleet data. The dataset format allows you to **build your own database** of drillers, their fleets and drilling capabilities. Filter by horsepower or drilling depth to identify those best suited for your drilling operations. Use the drawworks data to understand the rig fleet and what equipment and services are most likely needed for their activity. With both U.S. land and Gulf of Mexico, you'll **get a complete picture** of the U.S. rig fleet onshore and offshore.

## Monthly subscriptions available
